

1999-2000 Statistics from the FBI Uniform Crime Reporting Program

This table lists the year of the report, number of offenses and rate per 100,000 people.

Year	Number of Offenses	Rate per 100,000 women
1999	89,411	32.8
2000	90,186	32.0
Percent Change	+ .9*	-2.3

* The national estimate of 90,186 forcible rapes (female only) marks the first increase since 1992. It is unclear whether this is due to an increase in incidence or an increase in reporting.

1. This table reflects the number of forcible rapes reported to law enforcement across the country during 1999 and 2000 and has the following limitations:

A. The FBI defines forcible rape as "the carnal knowledge of a female forcibly and against her will". This definition does not include statutory rape (rape without force), other sex crimes, or the rape of men.

B. The UCR records incidence rates of REPORTED rapes. According to this method only persons raped within a specific period and who notify law enforcement are considered victims.

C. Research indicates that up to 80-90% of rapes are not reported and that stranger rapes are more likely to be reported than acquaintance rapes.

D. The use of incidence rates in isolation may obscure the overall frequency of rape and attempted rape.
